## Tris Buffered Saline

## Catalogue Number: TBSX530

For in vitro diagnostic use only.

## Intended Use

Diagen Tris Buffered Saline (TBS) can have many uses because of its isotonic and non-toxic characteristics. As well as being used to dilute substances, additives can be used to add function to the solution.

## Summary and Principle

TBS is a buffer used in some biochemical techniques to maintain the pH within a relatively narrow range. Tris (with HCl ) has a slightly alkaline buffering capacity in the 7-9.2 range. Tris has a $\mathrm{pK}_{\mathrm{a}}$ of 8.06 at $20^{\circ} \mathrm{C}$ and the $\mathrm{pK}_{a}$ declines approximately 0.03 units per degree Celsius rise in temperature. This means that relatively dramatic pH -shifts can be experienced when solution temperature changes.

## Reagent

Tris buffered Saline pH 7.6
250 mL
Tris Buffered Saline at pH 7.6 with Sodium Azide added as a preservative. For in vitro diagnostic use only. The reagent is ready to use.

## Warnings and Precautions

Please refer to the TBS SDS (IMBXMSDS) for further information on safety precautions and advice.

## Collection of Blood Samples

Blood (9 parts) is collected into 1 part of 3.2\% trisodium citrate and the plasma obtained by centrifugation at 2500 g for 15 minutes. The plasma should be stored in stoppered tubes. The use of $3.2 \%$ citrate containing 5\% HEPES buffer improves the stability of both fresh and deep-frozen plasma.

## Procedure

For the relevant instrument/test procedure please refer to the pack insert included with the test reagent, kit or plasma for specific advice.

## Storage and stability

Unopened reagent is stable for 3 years when stored at $2-8^{\circ} \mathrm{C}$. Once opened the reagent is stable for 90 days at $2-8^{\circ} \mathrm{C}$.

## Packaging

$1 \times 250 \mathrm{~mL}$ bottle.
